

Preparation of Whole Slide Images for usage in Neural Networks

Master Thesis

Submitted in partial fulfillment of the requirements for the degree
of

Master of Science (M.Sc.)
in Applied Computer Science

at the

Berlin University of Applied Sciences (HTW)

First Supervisor: Prof. Dr. Peter Hufnagl

Second Supervisor: Diplom Informatiker Benjaming Voigt

Submitted by:

Sascha Nawrot (B.Sc.)

Berlin, April 11, 2016

Abstract

This is the abstract.

Preface

Hello, this is the preface

Chapter 1

Introduction

1.1 Motivation

1.2 Research Objective

1.3 About this thesis

Apart from the *Introduction*, there are 5 more chapters in this thesis.

Chapter 2 - Background defines some terminology and the general, required process chain which are all necessary to understand further chapters of this thesis. Furthermore, 3 microservices will be introduced in short.

Chapter 3 - Methodology gives an overview over the current state of research for each microservice, as well as best practices.

Chapter 4 - Implementation goes into further details about how each microservice is implemented and which software and frameworks were used for that.

Chapter 5 - Discussion will introduce a measurement for each microservice to measure its success. It will discuss the test setup as well as list the results.

Chapter 6 - Conclusion will interpret the Results from Chapter 5 and analyze them closer. Furthermore, it will give an idea of what steps are to be taken next in the future.

Chapter 2

Background

2.1 Definition of terms

2.1.1 Deep Zoom Image Format

The Deep Zoom Image Format (.dzi) is an xml-based file format maintained by Microsoft to improve performance and quality in the handling of large image files. Therefore an image will be represented in a tiled pyramid scheme (see fig. 2.1).

Figure 2.1: of the dzi pyramid image representation (source: <https://i-msdn.sec.s-msft.com/dynimg/IC141135.png>)

As seen in fig. 2.1 there are multiple versions of a single image in different resolutions. The idea behind this is, that if a user wants to see a whole picture

zoomed out or as a small thumbnail, it is not necessary to load the image file in its highest resolution. To save bandwidth a version with a smaller resolution is loaded. If the user wishes to zoom in on a specific area of the image, a version with a higher resolution is loaded. Once again, however, it is not necessary to load the whole image, since only a fraction of it will be visible. For this reason there are tiles of the image which are loaded instead (see highlighted tiles in fig. 2.1) [1].

Each resolution in the pyramid is called a *level*. At each level the image is scaled down by the factor 4 (2 in each dimension). In other words, a level can be defined as an image with the resolution 2^{level} for height and width, resulting in a resolution of $(2^{\text{level}})^2$. Levels are counted from level 0 (1*1 Pixel) [1]. E.g. the levels shown in fig. 2.1 are:

- level 8 ($2^8 = 256$) for the 256^2 pixel image
- level 9 ($2^9 = 512$) for the 512^2 pixel image
- level 10 ($2^{10} = 1024$) for the 1024^2 pixel image

2.1.2 Microservice

2.1.3 Machine Learning

2.1.4 Neural Networks

2.2 Process chain

2.2.1 Description

2.2.2 Definition of Conversion Service

2.2.3 Definition of Annotation Service

2.2.4 Definition of Tessellation Service

Chapter 3

Methodology

3.1 Conversion Service

3.1.1 Literature review

3.1.2 Chosen methods

3.2 Annotation Service

3.2.1 Literature review

3.2.2 Chosen methods

3.3 Tessellation Service

3.3.1 Literature review

3.3.2 Chosen methods

Chapter 4

Implementation

4.1 Implementation of Conversion Service

4.1.1 Used technologies and frameworks

4.1.2 Documentation

4.2 Implementation of Annotation Service

4.2.1 Used technologies and frameworks

4.2.2 Documentation

4.3 Implementation of Tessellation Service

4.3.1 Used technologies and frameworks

4.3.2 Documentation

Chapter 5

Discussion

5.1 Conversion Service Test

5.1.1 Setup

5.1.2 Results

5.2 Annotation Service Test

5.2.1 Setup

5.2.2 Results

5.3 Tessellation Service Test

5.3.1 Setup

5.3.2 Results

Chapter 6

Conclusion

6.1 Results

6.2 Conclusion

6.3 Future tasks
